Statement on principal adverse impacts of investment decisions on sustainability factors

30 June 2023 Version 1.0

Product name BBGI Global Infrastructure S.A. Legal entity identifier 529900CV0RWCOP5YHK95

Summary

BBGI Global Infrastructure S.A. ('BBGI' or 'the Company', LEI: 529900CV0RWCOP5YHK95) considers principal adverse impacts of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of BBGI Global Infrastructure S.A.

This statement on principal adverse impacts on sustainability factors covers the reference period from 1 January 2022 to 31 December 2022.

Zusammenfassung

BBGI Global Infrastructure S.A. ('BBGI' oder 'das Unternehmen', LEI: 529900CV0RWCOP5YHK95) berücksichtigt die wichtigsten negativen Auswirkungen seiner Investitionsentscheidungen auf Nachhaltigkeitsfaktoren. Dieses konsolidierte Dokument enthält die wichtigsten negativen Auswirkungen von BBGI Global Infrastructure S.A. auf Nachhaltigkeitsfaktoren.

Die Ausführungen zu den wichtigsten negativen Auswirkungen auf Nachhaltigkeitsfaktoren bezieht sich auf den Zeitraum vom 1. Januar 2022 bis zum 31. Dezember 2022.

Description of the principal adverse impacts on sustainability factors

Adverse sustainability indicator	Metric Impact 2022		Impact 2021	Explanation	Actions taken, and actions planned and targets set for the next reference period
				For building assets, Portfolio Companies only have very limited authority to introduce or implement operating policies at the facility, as the energy consumption and the consequential GHG emissions are within the control of public sector clients, which under the <i>GHG Protocol guidance</i> would be excluded following the operational control approach.	
				Nevertheless, the figures reported include all emissions sources which could be obtained from Portfolio Companies, irrespective of the fact that for most of the projects BBGI does not have operational control over Scope 1 and 2 emissions.	
				Emissions sources included:	
				The following section details which activities were included to quantify BBGI's Financed Emissions.	
				Buildings:	
				- <i>Scope 1</i> includes indirect emissions from fossil fuels burnt on-site for space heating and hot water.	
				 Scope 2 includes purchased electricity consumed on-site for heating, air-conditioning, hot water and lighting. 	
				 Scope 3 includes water and waste; emissions relating to maintenance, repairs and retrofits; and soft services such as cleaning and landscaping performed by the operator. Scope 3 also includes major lifecycle works or expansions works, which create emissions peaks. 	

	Indicat	ors applicable to	investme	ents in investee companies	
Adverse sustainability indicator	Metric	Impact 2022	lmpact 2021	Explanation	Actions taken, and actions planned and targets set for the next reference period
				Transportation assets:	
				 Scope 1 includes direct emissions from fossil fuels burnt on-site (e.g. operator's site depot) for space heating and hot water. 	
				 Scope 2 includes electricity consumed on-site (operator's site depot) for heating, air-conditioning, hot water, and lighting, and electricity consumed by the asset itself for road lighting, electrical signs, or pumps where applicable. 	
				 Scope 3 includes emissions which are material to the Portfolio Company's activities, such as: emissions from routine maintenance and treatment of road surfaces, de-icing material, waste generated by the asset; emissions from operator's vehicles used for road maintenance; and water and waste consumption from the operator's depot. Scope 3 emissions also includes major lifecycle interventions, such as road resurfacing, which create GHG emissions peaks. 	
				Assets in construction:	
				GHG emissions from assets which are in construction or being expanded during the reporting period are also accounted for, and reported separately from emissions which relate to operational assets.	
				Avoided emissions:	
				According to <i>PCAF guidance</i> , avoided emissions are the estimated emissions that have been avoided due to an uptake of renewables during the reporting year,	

Adverse sustainability indicator			Impact 2021	Explanation	Actions taken, and actions planned and targets set for the next reference period	
			or the emissions of a renewable energy financed project compared to what would have been emitted in the absence of the project. In this comparison it is assumed that the production of renewable energy (over the reporting period) might have avoided the need to run certain fossil fuel power plants. Source of emission factors used:			
				Country-specific emission factors were used.		
				Scope 2 emissions have been reported using a market-based approach, in line with the GHG Protocol Scope 2 Guidance (January 2015), which accounts for certified renewable electricity purchased by Portfolio Companies. Projects that purchase renewable electricity from the grid must take into account the losses from the transmission and distribution (T&D) of the electricity. For simplicity, T&D losses were assumed to be 7% for all projects, assuming they are all connected to low-voltage grid. The Company used IFI's ⁴ Operating Margin Grid Emission Factor Dataset v.3.2.		
				Avoided emissions were estimated based on IRENA's Avoided Emissions Calculator ⁵ .		
				To assess the GHG emissions associated to the annual budgets spent on maintenance and retrofits, and

Adverse sustainability indicator	Metric Impact 2022		Impact 2021	Explanation	Actions taken, and actions planned and targets set for the nex reference period
				routine or major lifecycle maintenance, the spent amount recorded in the Portfolio Companies' annual accounts was converted to GHG emissions using EXIOBASE 3 ⁶ 'construction works' country-specific conversion factors for major lifecycle works or expansions; and 'real estate services' country-specific conversion factors for routine lifecycle works and soft services. Materials emissions factors have been taken from the Inventory of Carbon and Energy (ICE) version 3 ⁷ . Estimations: In a very limited number of assets, if a Portfolio Company could not provide primary activity data or when the public sector client could not make this data available, it was estimated using other years where	reference period
				data was available. Verification:	
				To quantify the associated GHG emissions, the assumptions and conversion factors were either performed by or validated with an external advisor.	
				The financial data used to calculate the attribution factor, were taken from the latest available statutory annual accounts for each Portfolio Company.

Water	8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0 tonnes/€m invested	N/A	All projects are required to comply with local and national regulations regarding wastewater treatment. BBGI monitors whether any emissions to water have been generated by a Portfolio Company. Data availability: Data availability High 100% of the data obtained directly from Portfolio Companies	BBGI will continue to engage with the small number of Portfolio Companies in question, to monitor whether any water containing pollutants are potentially released to surface water, ground water or rivers without any prior treatment.
Waste	9. Hazardous waste and radioactive waste ratio	waste andwaste and radioactivetonnes/€radioactivewaste generated byinvested	0.03 tonnes/€m invested	N/A	 All projects are required to comply with local and national regulations regarding hazardous waste treatments. BBGI monitors whether any hazardous waste or radioactive waste could have been generated by the Portfolio Company. For a limited number of assets, we have identified the type of hazardous waste being generated at the asset, which, in all cases, is outside of the Portfolio Company's operational control. Transportation assets: hazardous waste is either due to debris or spills following collisions which are either left on the road or spill into road gullies. Major hospitals: hazardous waste is either due to cytotoxic, clinical, or pharmaceutical waste. At each asset appropriate containment measures or means of decontamination and disposal are in place. 	without any prior treatment. BBGI will continue to monitor whether other containment measures will be required in the future.

BBGI conducts an annual update of data covering the full year.	3BGI conducts an annual update of the PAI metrics, by obtaining data directly from its Portfolio Companies. The data reported in the above table is then based on						

Description of policies to identify and prioritise principal adverse impacts on sustainability factors

BBGI follows a responsible investment policy whereby ESG issues are integrated into investment decisions, asset management and stewardship decisions. Principal adverse impacts on sustainability factors ('PAI') are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and governance issues.

A high-level summary of our internal policies, conducted to identify and prioritise PAI on sustainability factors, is outlined below:

1 Negative screening

Prior to any acquisition, BBGI screens each potential new investments against a pre-defined exclusion list of certain types of activities that may cause significant harm to society and/or the environment, without counterbalancing benefits, such as: adult entertainment, alcohol, tobacco, weapons, nuclear weapons, combat-related activities, fossil fuels, gaseous fuels, coal, destruction of critical habitats, breach of fundamental human rights, modern slavery and human trafficking, money laundering, terrorism financing and gambling.

In line with its exclusion policy, BBGI will make no investment in any investments which activities are part of the Company's exclusion list.

Refer to BBGI's ESG & Sustainability Risk Policy for the complete exclusion list.

The ESG & Sustainability Risk Policy was last approved by the Management Board in June 2023. The ESG/Sustainability Director is responsible for the development and upkeep of the ESG & Sustainability Risk Policy. The Management Board, ESG Committee, and ESG/Sustainability Director are responsible for updates to our approach to integrating sustainability risk into our processes and for the implementation of the ESG & Sustainability Risk Policy.

2 Positive screening

The Sustainable Development Goals ('SDGs') guide our ESG and social impact management process. Our investment strategy seeks to create measurable impacts facilitated by our investments and future acquisitions.

The SDGs are used to assess, measure, and monitor that we keep investing beyond mere alignment and make a positive contribution to social and environmental outcomes. We acknowledge that through our direct operations and investment portfolio, we may also create adverse impacts on sustainability factors, and we address these impacts in this statement.

Statement on principal adverse impacts of investment decisions on sustainability factors

Sustainable Development Goals	Sustainability indi	icators	Impacts	
3 GOOD MEALTH 23%	41 healthcare facilities	C. 600,000 m ² managed	c.4 million patients	Hospitals, and primary healthcare centres provide access to healthcare delivery for c.4 million patient: a year and over 2,400 beds.
<i>-</i> ₩ ●	26 fire stations	C. 33,000 m ² managed	C. 800,000 people	Fire stations provide c.800,000 people with protection against fire-related injuries and fatalities and mitigation of air, water and soil pollution caused by fire incidents. Fire stations also play a critical role as part of a first responders' network, supporting local populations.
4 COLUTY EDUCATION 9%	33 schools and colleges	C. 430,000 m ² managed	c. 36,000 pupils	Schools and colleges provide c.36,000 pupils with access to primary, secondary and adult education i an effective learning environment.
9 MOLSTIC INCOMPANY 9 MAD INFRASTRUCTURE 51%	19 roads and bridges	c. 2,800 single-lane kms	c. 290 million	Roads and bridges provide local population with reliable and resilient transport, and reduce travel times for c.290 million vehicles a year.
	1999, A. P. Anno 19, 2001, Anno 📼 2001	operated		The maintenance of road networks and bridges is necessary for (i) reliable and safe access, (ii) reduci traffic congestion, and (iii) decreasing greenhouse gas emissions by reducing transit times. Maintaini road elements, signalling, surfacing, and other security measures is crucial for a safe journey.
	1 hydroelectric generation station	132 MW installed	c. 80,000 homes	Hydroelectric power station supports the access to clean and reliable electricity for over 80,000 hom while providing flood control and domestic water supply.
11 AND COMMUNITIES 6%	1 fully electric public transit line	c. 39 kms	c. 32 million	Urban rail transport is a safe and sustainable means of public transport for c.32 million passengers pr year, given the fully autonomous nature of the transit system, which is powered by electricity.
	3 affordable residential housing and2 community centres	c. 17,000 m²/ 100 units	C.200 people	Residential housing units support the access to affordable housing for c.200 people per year, complemented by sport and leisure centres for the local community.
16 PEACE JUSTICE AND STRONG INSTITUTIONS	4 police stations	c. 16,000 m ² managed	c. 1.5 million	Police stations promote the rule of law and provide safety for c.1.5 million people per year.
<u>¥</u> ,	3 modern correctional facilities	C. 190,000 m ² managed	C. 2,500 detainees	Modern correctional justice facilities promote the rule of law and are a necessary link in the functioning of judicial systems for c.2,500 detainees a year.
	2 public administration buildings	c. 37,000 m ² operated	C. 500,000 people	Public administration buildings provide c.500,000 people with access to public services.
13 STIMATE Climate action	100% of our assets are screened adaptative capacity to clir and natural disasters.		Our portfolio of s	ocial infrastructure investments demonstrates a high degree of climate resilience.

Refer to BBGI's ESG Report for an overview of the social impacts facilitated by BBGI's portfolio.

B Do no significant harm

Identify principal adverse impacts

During our internal ESG due diligence process, each new investment is screened to test that they do not cause adverse impacts to a selection of sustainability factors. The Company may engage external third parties to conduct due diligence on a case-by-case basis.

The conclusions of the internal ESG due diligence research is completed as part of the Investment Committee papers and reported to the Investment Committee and forms integral part of the overall investment decision.

Margin of error

The methodology to identify PAI is always subject to data availability and quality. We are reliant on the quality of data received from Portfolio Companies. To the extent possible, data reported by Portfolio Companies is prioritised. This is done in order to minimise the reliance on third-party estimations, contributing to improving the overall quality of the data we use as input in our due diligence and investment processes.

Where reported data is not available or of adequate quality, we use estimates-based data obtain for other years or in a limited number of instances proxy data provided by third-party data providers.

Prioritise principal adverse impacts

The potential adverse impacts screened during the Company's ESG screening process of an investment have been prioritised to focus on sustainability factors which are material to BBGI's investments.

The probability of occurrence, the severity and the potential irremediable character of each PAI considered, by the Company's ESG framework, may vary depending on the type and location of each investment. On a best-effort basis, the Company intends to consider the above-mentioned aspects of each PAI in our ESG screening and monitoring processes.

Consider principal adverse impacts

To conduct the ESG screening process on PAI on sustainability factors, the Company uses a proprietary ESG KPI survey to elicit further more detailed information.

The core areas of our ESG screening are:

- **Environment**: GHG emissions, implementation of efficiency measures for energy, water and waste, biodiversity, water usage and water recycling, waste management, certifications and environmental management systems, and positive environmental impacts.
- **Social**: human rights, board gender diversity, health and safety, gender pay gap, supplier's responsible business practices, and positive social impacts.
- **Governance**: general governance, anti-corruption and anti-bribery matters, delegation and oversight, data and cyber-security, risk and compliance.

Sight of internal policies and procedures in place at the Portfolio Company may also be required as part of this process, to enable the Company to form a view as to whether Portfolio Companies have in place sound management structures, and an appropriately robust approach to various PAI. These policies are, inter alia:

Policies relevant to identify, prioritise, consider and monitor principal adverse impacts	Policy implementation rate	Policy latest review date	Allocation of responsibilities
Biodiversity	95%	Between 2021 and 2022	The Company develops each
Code of conduct including anti- bribery, anti-corruption and non-discrimination	100%	Between 2021 and 2022	policy internally. BBGI strives to implement these policies across all
Diversity (only relevant if the Portfolio Company directly employs more than three employees in similar functions)	83%	Between 2021 and 2022	Portfolio Companies, it is not always possible to achieve 100% adoption when we have co-shareholders.
ESG	98%	Between 2021 and 2022	Each policy should be reviewed at least every 18
Health and safety (workplace accident prevention policies)	100%	Between 2020 and 2022	months by the Portfolio Company's board.
Anti-slavery and human trafficking (or equivalent Modern Day Slavery in the UK)	98%	Between 2021 and 2022	
Responsible contractor	98%	Between 2021 and 2022	
Whistleblowing	98%	Between 2021 and 2022	

Mitigation of principal adverse impacts

The Company's ESG framework covers all aspects of ESG integration, sustainability-risk screenings and PAI oversight across all aspects of the investment cycle, from initial screening through to end of investment life. Among other things, this ESG framework seeks to understand if PAI which could arise from our investment decisions, by screening and performing due diligence on PAI for each new investment.

4 Monitoring

Monitor principal adverse impacts

If/when an investment is made, the ESG performance of each Portfolio Company is monitored against BBGI's proprietary ESG KPI survey.

The ESG KPI survey, composed of 100+ data points, covers all core areas of our ESG oversight. The topics covered in the ESG KPI survey are selected based on their materiality, either because of impacts the investments could cause on the environment and society or because of the positive impacts it creates.

The list of PAI considered in the Company's ESG screening covers inter alia:

Climate and other environment-related matters	Social and employee, respect for human rights, anti- corruption and anti-bribery matters			
Greenhouse gas emissions	UN Global Compact principles & Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises			
Climate-related risks	Unadjusted gender pay gap			
Energy consumption	Board gender diversity			
Energy performance and efficiency	Exposure to controversial weapons			
Biodiversity	Health and safety			
Water	Human rights			
Waste	Anti-corruption and anti-bribery			

Once invested, we use our active management and direct presence at the Portfolio Companies' board meetings to consider the possible improvements across the PAI identified. Where possible we may engage with Portfolio Companies' subcontractors and public sector clients to provide support in the evaluation and delivery of specific improvement projects.

5 Improvement

Improve data availability of principal adverse impacts indicators

The Company collects all relevant metrics to assess the PAI indicators directly from its Portfolio Companies, through its proprietary ESG KPI survey.

The Company has self-assessed the data availability of its PAI indicators and has quantified a data availability score of Low – Medium - High. The section 'Description of the PAI on sustainability factors' details the data availability and quality score for each PAI indicator.

Data availability score	Description	Example
High	Data obtained directly from Portfolio Companies.	GHG emissions: With limited exceptions, BBGI has collected primary activity data from its Portfolio Companies.
Medium	Output of internal research or estimates based on reasonable assumptions.	<u>Biodiversity:</u> Due diligence on a project's impact on biodiversity may be obtained through researching environmental impact assessment reports which are part of the public domain.
Low	Acquired from third-party data providers.	The Company currently does not rely on any indirectly obtained data to assess PAI indicators.

Engagement policies

As stewards of important social infrastructure investments, there are many stakeholders impacted by our actions: users of the infrastructure, communities living next to our assets, our staff, investors, public sector clients, subcontractors, the environment, and society at large.

The Company's engagement approach to reduce PAI across our portfolio is as follows:

Active management: Regular attendance at Portfolio Companies' board meetings. In 2022, at least one BBGI staff member was present for 100 per cent of all board meetings where BBGI has a seat. Regular asset visits and regular client meetings are also part of this philosophy.

Engagement: Once invested, we use our influence with Portfolio Companies to consider ESG and sustainability factors that have the potential to create adverse impacts on the asset. We provide support in the evaluation and delivery of specific projects.

Topics of engagement: The list of PAI considered in the Company's ESG engagement could cover inter alia:

(limete and other environment-related matters	Social and employee, respect for human rights, anti-corruption and anti-bribery matters
Greenhouse gas emissions	Health and safety
Climate-related risks	Impact for local communities
Energy consumption, performance, and efficiency	Governance practices

As BBGI does not invest in listed companies, proxy voting does not apply to our asset class.

The Company's engagement approach with our key stakeholders is summarised below:

Company's key stakeholders engaged with:	Types of regular engagements:	Engagements taken during the year:
Our public sector clients Satisfied public sector clients are critical to our business model.	 Regular client meetings Service quality feedback Sharing results of our climate risk monitoring Ongoing reporting Net Promoter Score survey 	Meetings with our clients drives our asset management approach and feeds directly into our decision-making process; lessons learned from one asset are adapted and applied across the portfolio.
Our subcontractors Our long-term subcontractors are critical to ensure that we provide our public sector clients with operational and available assets. We monitor our subcontractors to ensure that they conduct their business according to the high standards of ethics and integrity that we expect.	 Sub-contractor monitoring ESG onboarding Annual ESG KPI survey Ongoing ESG engagement topics and joint initiatives 	Enhancing our monitoring of ESG practices across all Portfolio Companies and their supply chain through pre- existing channels, such as the ESG KPI survey.
Our communities and users The positive experience of the people who use our assets and the communities who live near to our assets are vital to ensuring our success as a responsible global infrastructure investment company.	 Client satisfaction discussed at corporate and Portfolio Companies' level Partnership, sponsorship and donations Community engagement initiatives 	Supporting initiatives that benefit the communities living near to our assets. Please refer to the case studies on our website , <u>here</u> .

References to international standards

SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

- BBGI is a signatory of the <u>UN Global Compact</u> since 2020. We actively monitor the Ten Principles of the United Nations Global Compact in the areas of Human Rights, Labour, Environment, and Anti-Corruption in our operations and across our Portfolio Companies. The Ten Principles of the UNGC are derived from: the <u>Universal Declaration of Human Rights</u>, the <u>International Labour Organization's (ILO)</u> <u>Declaration on Fundamental Principles and Rights at Work</u>, the <u>Rio Declaration on Environment and</u> <u>Development</u>, and the <u>United Nations Convention Against Corruption</u>.
- BBGI shall verify, on a best-effort basis, that the policies on anti-bribery and anti-corruption in place at Portfolio Companies are in essence consistent with the <u>UN Convention against Corruption</u>.
- BBGI screens the key counterparties to the Portfolio Companies (vendor, equity partners, etc.) against the most up to date watchlists maintained by the UN, EU, FATF and national regulators with the aim to ensuring that they have not been exposed to any violations of <u>the UNGC Guiding Principles</u> and the <u>OECD Guidelines for Multinational Enterprises</u>.

Indicators used to consider the principal adverse impacts on sustainability factors that measure the adherence or alignment referred above:	 PAI 10: Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises 	
	PAI 21: Investments in companies without workplace accident prevention policies	
	PAI 22: Lack of a supplier code of conduct	
	PAI 23: Lack of a human rights policy	
	PAI 24: Lack of anti-corruption and anti-bribery policies	
Methodology and data used to measure the adherence or alignment referred above:	BBGI conducts ongoing monitoring of Portfolio Companies across the entire investment lifecycle on all the PAI listed above. Please refer to the explanations provided in the adverse sustainability indicators table above.	
	Please see our ESG Report which can be found here.	
	The ESG Report has been approved by the Management Board in May 2023.	

CLIMATE AND OTHER ENVIRONMENT-RELATED MATTERS

- BBGI publicly supports the Paris Agreement.
- BBGI is a <u>TCFD</u> supporter.
- BBGI is a signatory to the <u>Net Zero Asset Managers Initiative ('NZAM')</u>.

Indicators used to consider the principal adverse impacts on sustainability factors that measure the adherence or alignment referred above:	PAI 1: Total GHG emissions	
	PAI 5: Share of non-renewable energy consumption and production	
	PAI 19: Breakdown of energy consumption by type of non-renewable energy sources	
	Portfolio Companies (by value) with a long-term goal to be net zero by 2050 or sooner.	
	Sustainability objectives linked to the Management Board members Long- Term Incentive Payment (LTIP) arrangements.	
Methodology and data used to measure the adherence or alignment referred above:	As signatories to the NZAM, BBGI targets to reach net zero emissions across our portfolio by 2050 or sooner were set in line with the Paris- Aligned Investment Initiative Net Zero Investment Framework and the specific IIGCC guidance for the infrastructure sector.	
	Our targets were validated and approved by the IIGCC in March 2023. While the guidance and tools to assess financed emissions and track progress towards net zero will evolve, we recognise our responsibility to ensure GHG emissions are adequately accounted for across our Corporate Emissions and Financed Emissions.	
	Please see our Net Zero Plan which can be found here.	
	The Net Zero Plan has been approved by the Management Board in December 2022.	
	Please see our ESG Report which can be found <u>here</u> .	
	The ESG Report has been approved by the Management Board in May 2023.	
	Please see our voluntary TCFD Disclosures which can be found <u>here</u> .	
	The IIGCC Guidance for infrastructure assets can be found <u>here</u> .	

REPORTING

- BBGI is a signatory of <u>UN Principles for Responsible Investments</u> since 2019 and publishes a Transparency Report.
- BBGI is a signatory of the <u>UN Global Compact</u> since 2020 and publishes its Communication on Progress every year.
- BBGI is a <u>TCFD</u> supporter since 2020 and voluntarily reports on a voluntary basis every year.

Please see our latest reporting and disclosures which can be found here.
